WIFI	
Modem	802.11 b/g standard
WIFI hotspot	Receiver broadcasts its hotspot form web UI
	accessing with any mobile terminals
WIFI datalink	Receiver can transmit and receive correction
	data stream via WiFi datalink

Data Storage/Transmission
Storage 64GB SSD internal storage
Automatic cycle storage (The earliest data
files will be removed automatically while the
memory is not enough)
Support external USB storage
The customizable sample interval is up to 50Hz
Data Transmission Plug and play mode of USB data transmission
Supports FTP/HTTP data download
Data Format Differential data format: CMR+, SCMRx, RTCM 2.1,
RTCM 2.3, RTCM 3.0, RTCM 3.1, RTCM 3.2
GPS output data format: NMEA 0183, PJK plane
coordinate, Binary code, Trimble GSOF

Network model support: VRS, FKP, MAC,

fully support NTRIP protocol

Sensors	
Electronic BubbleController software can d	isplay electronic
bubble, checking leve	ling status of the

IMU Built-in IMU module	, calibration-free
and immue to magn	etic interference
ThermometerBuilt-in thermometer sensor, ad	opting intelligent
temperature control techno	logy, monitoring
and adjusting the rece	ver temperature

User Interaction	
	Linux
	2-button and visual operation interface
	2 LED indicators, data interaction indicator
indicatoro	and Bluetooth indicator
I CD	1.54-inch HD color LCD touch screen
	with resolution 240*240
Web interaction	With the access of the internal web interface
	management via WiFi or USB connection, users
	are able to monitor the receiver status and
	change the configurations freely
Voice guidance	The intelligent voice technology provides status
	and operation voice guidance, supports
	Chinese/English/Korean/Spanish

Secondary developme	nt Provides secondary development
	package, and opens the OpenSIC observation
	data format and interaction interface definition
Cloud service	The powerful cloud platform provides online
	services like remote manage, firmware update,
	online register and etc

[1] It requires a subscription to data service.

[2] RTK XTRa also requires a subscription to the data service, and precision is dependent on GNSS satellite availability. RTK XTRa positioning ends after 5 minutes of radio downtime.

Remarks: Measurement accuracy and operation range might vary due to atmospheric conditions, signal multipath, obstructions, observation time, temperature, signal geometry and number of tracked satellites. Specifications subject to change without prior notice

## INNO7

- Smart interactive RTK receiver -

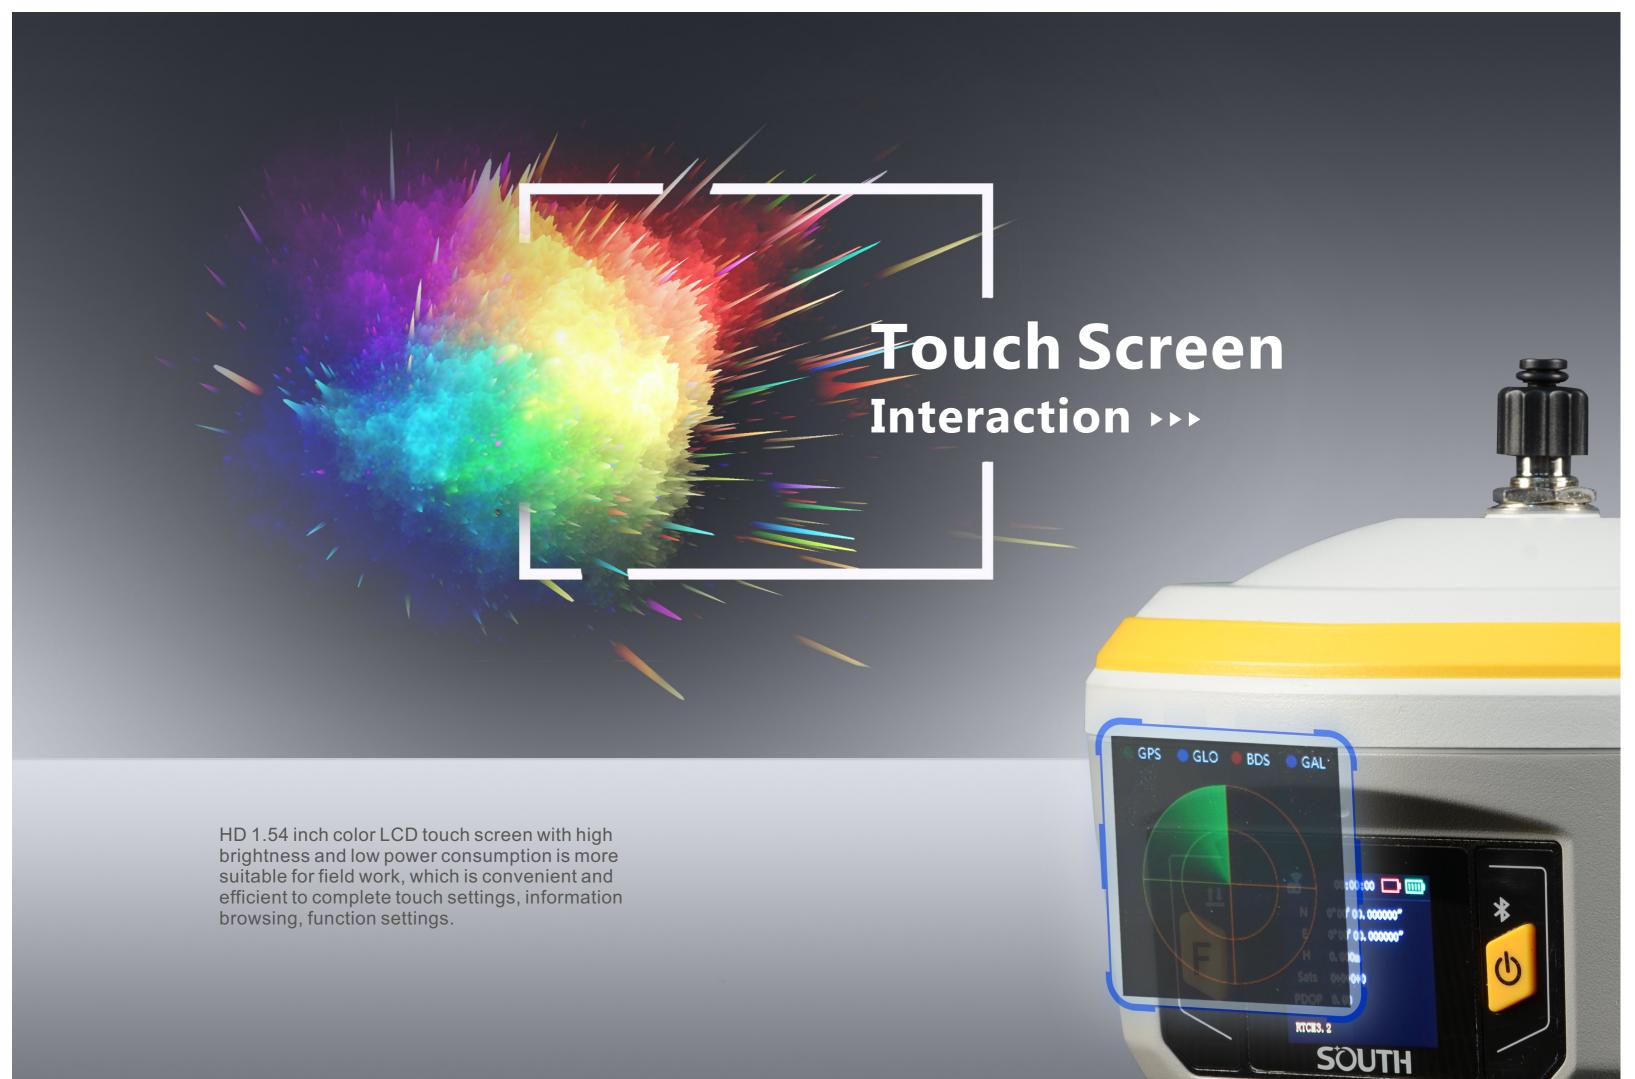

# FarLink Protocol >>>

INNO7 adopts an internal radio with 3W maximum transmission power to achieve the typical working range as 15km through "**Far-link**" protocol.

The transmission bandwidth becomes large, which perfectly solves the problem of large data volume of multiple constellations transmission. And the power consumption can reduce about 60% in the same amount of data transmission compare to the traditional RTK.

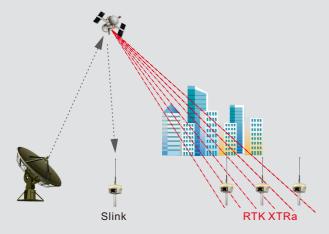

### Slink & RTK XTRa ▶▶▶

Base on the RTX global services, INNO7 is able to achieve the goal of precise single-point positioning without a reference, the positioning is no more constrained by terrain environment, such as mountain, wasteland, desert, island, fixed solution is generally available as long as the GNSS constellations are visible.

Moreover, RTK XTRa technology which is derived from RTX services, it can extend RTK positioning for several minutes while the RTK primary source of correction stream is interrupted or not available, it really makes RTK bright anywhere.

#### 64GB SSD ▶▶▶

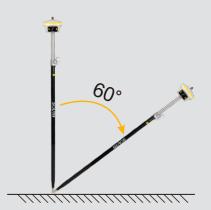

Built-in 64GB solid-state storage, which can meet most needs of measurement works. And the feature of cyclic storage helps receiver to automatically remove the previous files while there is not enough space in the memory, with this excellent performance, data storage can last almost 4 years based on 5s sampling interval. And the design of embedded memory chip can ensure the safety of measurement data.

#### The 'Fast' IMU ▶▶▶

INNO7 is integrated with a new generation IMU module that it only needs 2-5s of shaking receiver to complete the initialization, and the maximum tilt compensation angle can be 60 degree. it can ignore magnetic interference while RTK receiver works in such a magnetic environment. This professional IMU module can keep the tilt effect for about 40s if RTK receiver stays on a point without moving.

IMU is an electronic unit which records angular velocity and linear acceleration data which is fed into a central processing unit for data interpreting and logging. When the RTK receiver moves, and then it will record the data and send back to the receiver for calculating to output the corrected result of position.

## RTK<sup>2</sup> ▶▶▶

Innovative "dual RTK engine algorithm technology" to achieve secondary coordinate check and calculation, effectively avoiding the problem of fake coordinates, more reliable coordinate accuracy and higher stability.
