#### **SPECIFICATIONS**

GNSS Features	
GPS	L1C/A, L1C, L2C, L2E, L5
GLONASS	L1C/A, L1P, L2C/A, L2P, L3
BDS	B1, B2, B3
	E1, E5A, E5B, E5AltBOC, E6
SBAS L1C/A, L	5 (Just for the satellites supporting L5)
IRNSS	L5
	L1C/A, L1 SAIF, L2C, L5, LEX
	Trimble RTX <sup>[1]</sup>
	1Hz~50Hz
	<10s
initialization reliability	
Positioning Precision	
Code differential GNSS position	ing Horizontal: 0.25 m + 1 ppm RMS
·	Vertical: 0.50 m + 1 ppm RMS
GNSS static	Horizontal: 2.5 mm + 0.5 ppm RMS
	Vertical: 5 mm + 0.5 nnm RMS
Real-time kinematic	Horizontal: 8 mm + 1 ppm RMS
(Baseline<30km)	Vertical: 15 mm + 1 ppm RMS
SLink (RTX) <sup>[2]</sup> I	Horizontal: 4-10 cm Vertical: 8-20 cm
RTK XTRa (xFill)[3]	Horizontal: 5 + 10 mm/min RMS
	Vertical: 5 + 20 mm/min RMS
SBAS positioning	Typically<5m 3DRMS
	2~8s
IMU tilt angle	0°~60°
Hardware Performance	
	15.3cm(φ)×10.6cm(H)
Weight	1.2kg (battery included)
	Magnesium aluminum alloy shell
	25℃~+65℃
	-35℃~+80℃
Humidity	100% Non-condensing
Waterproof/Dustproof	IP68 standard, protected from long
	time immersion to depth of 1m
	IP68 standard, fully protected against
Shock/\/ibration	blowing dustWithstand 2 meters pole drop onto
SHOCK/ VIbration	the coment ground naturally
Power consumption	the cement ground naturally 2W
Power supply	6-28V DC, overvoltage protection
Battery	7.4 V 3400mAh rechargeable,
	removable Lithium-ion battery
Battery life	Single battery: 16h (static mode)
,	10h (internal UHF base mode)
	` 12h (rover mode)
	12h (rover mode)
Communications	12h (rover mode)

WIFI	
Modem	802.11 b/g standard
WIFI hotspot	Receiver broadcasts its hotspot form web UI
	accessing with any mobile terminals
WIFI datalink	Receiver can transmit and receive correction
	data stream via WiFi datalink

Data Storage/Transmission
Storage
Automatic cycle storage (The earliest data
files will be removed automatically while the
memory is not enough)
Support external USB storage
The customizable sample interval is up to 50Hz
Data transmission Plug and play mode of USB data transmission
Supports FTP/HTTP data download
Data format Differential data format: CMR+, SCMRx, RTCM 2.1,
RTCM 2.3, RTCM 3.0, RTCM 3.1, RTCM 3.2
GPS output data format: NMEA 0183, PJK plane
coordinate, Binary code, Trimble GSOF
Network model support: VRS, FKP, MAC,
fully support NTRIP protocol

Sensors	Se
Electronic bubble Controller software can display electronic	Ele
bubble, checking leveling status of the	
carbon pole in real-time	
IMU Built-in IMU module, calibration-free	IM
and immue to magnetic interference	
ThermometerBuilt-in thermometer sensor, adopting intelligent	Th
temperature control technology, monitoring	
and adjusting the receiver temperature	

User Interaction Operating systemLinux	
Buttons 2-button and visual operation interface	
Indicators2 LED indicators, data interaction indicator	Indic
and Bluetooth indicator	
LCD	LCD
with resolution 240*240	
Web interactionWith the access of the internal web interface	Web
management via WiFi or USB connection, users	
are able to monitor the receiver status and	
change the configurations freely	
Voice guidance The intelligent voice technology provides status	Voic
and operation voice guidance, supports	
Chinese/English/Korean/Spanish	
/Portuguese/Russian/Turkish	
Secondary development Provides secondary development	Seco
package, and opens the OpenSIC observation	
data format and interaction interface definition	
Cloud serviceThe powerful cloud platform provides online	Clou
services like remote manage, firmware update,	
online register and etc	

[1] It requires a subscription to data service.
[2] The RTX accuracies depend on correction service chosen. And 95% of the time with initializations are around 5-30 minutes.

[3] RTK XTRa also requires a subscription to the data service, and precision is dependent on GNSS satellite availability. RTK XTRa positioning ends after 5 minutes of radio downtime.

Remarks: Measurement accuracy and operation range might vary due to atmospheric conditions, signal multipath, obstructions, observation time, temperature, signal geometry and number of tracked satellites. Specifications subject to change without prior notice

# INNO7

- Smart interactive RTK receiver -

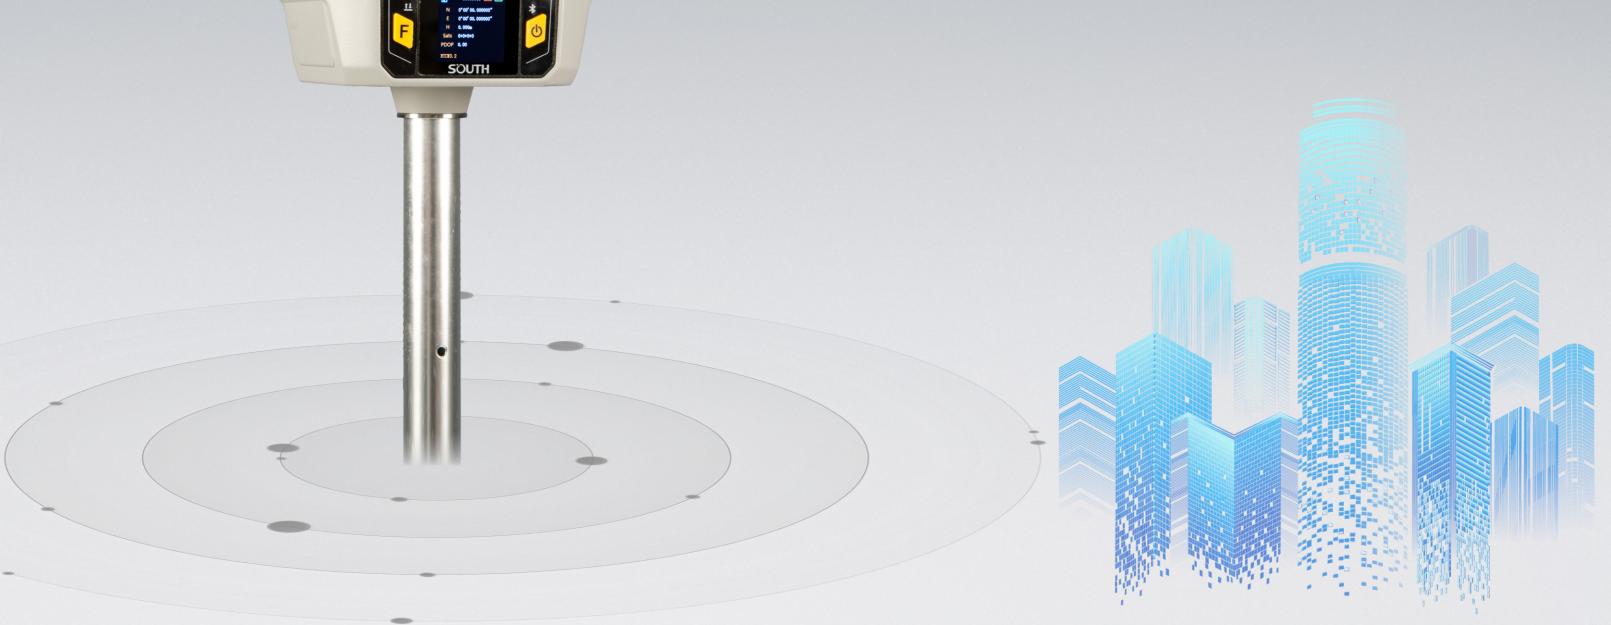

INNO7 is equipped with a high-speed 5G full netcom module, which supports the latest 5G communication network and gives the RTKs high speed information interaction and wider expansion space in the big data era. Based on intelligent PPP dial up technology, INNO7 realizes automatic dialing in real-time and keeps online during working.

# FarLink Protocol >>>

INNO7 adopts an internal radio with 3W maximum transmission power to achieve the typical working range as 15km through "Far-link" protocol.

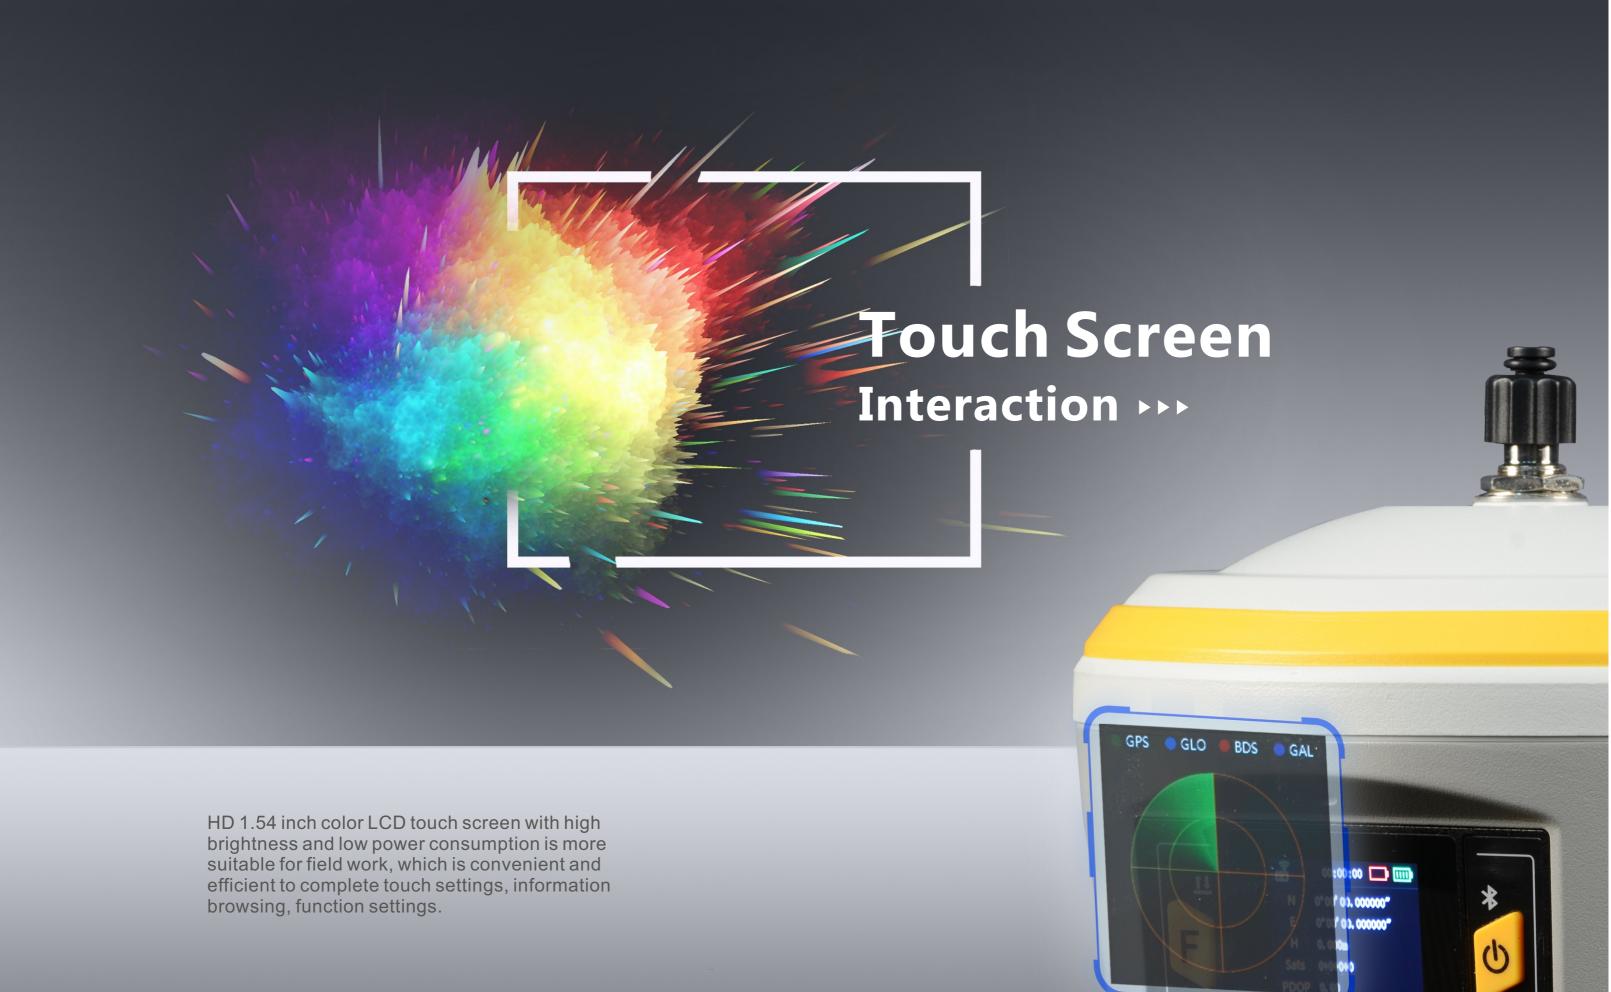

The transmission bandwidth becomes large, which perfectly solves the problem of large data volume of multiple constellations transmission. And the power consumption can reduce about 60% in the same amount of data transmission compare to the traditional RTK.

**15** KM Just use the inbuilt radio only

It is not a dream to achieve 15km working distance by using the inbuilt radio.

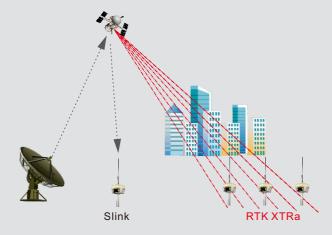

SOUTH

#### Slink & RTK XTRa ▶▶▶

Base on the RTX global services, INNO7 is able to achieve the goal of precise single-point positioning without a reference, the positioning is no more constrained by terrain environment, such as mountain, wasteland, desert, island, fixed solution is generally available as long as the GNSS constellations are visible.

Moreover, RTK XTRa technology which is derived from RTX services, it can extend RTK positioning for several minutes while the RTK primary source of correction stream is interrupted or not available, it really makes RTK bright anywhere.

### 64GBSSD ▶▶▶

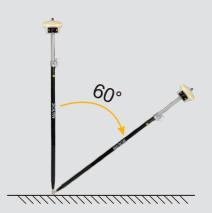

Built-in 64GB solid-state storage, which can meet most needs of measurement works. And the feature of cyclic storage helps receiver to automatically remove the previous files while there is not enough space in the memory, with this excellent performance, data storage can last almost 4 years based on 5s sampling interval. And the design of embedded memory chip can ensure the safety of measurement data.

### The 'Fast' IMU ▶▶▶

INNO7 is integrated with a new generation IMU module that it only needs 2-5s of shaking receiver to complete the initialization, and the maximum tilt compensation angle can be 60 degree. it can ignore magnetic interference while RTK receiver works in such a magnetic environment. This professional IMU module can keep the tilt effect for about 40s if RTK receiver stays on a point without moving.

IMU is an electronic unit which records angular velocity and linear acceleration data which is fed into a central processing unit for data interpreting and logging. When the RTK receiver moves, and then it will record the data and send back to the receiver for calculating to output the corrected result of position.

## RTK<sup>2</sup> ▶▶▶

Innovative "dual RTK engine algorithm technology" to achieve secondary coordinate check and calculation, effectively avoiding the problem of fake coordinates, more reliable coordinate accuracy and higher stability.
